

18. RESULTS OF OBSERVATIONS

18.1. Results of observations of meteorological parameters made at Hornsund during the Founding Expedition (1957–1958)

During the Polish Polar Expedition to Hornsund that was organized in framework of the third International Geophysical Year, systematic measurements and observations were made 8 times a day from July 24, 1957 to August 16, 1958. Tadeusz Makarewicz, MSc, of the weather service in the Kraków division of the Institute of Meteorology and Water Management (IMWM) was responsible for building the meteorological station and the observations. Observations were also made by other members of the wintering group.

The station was incorporated into marine weather service as Number 01006. Its coordinates and location were the same as the currently functioning station. Part of results of the observations made during the expedition was published shortly after its ending in various sources that, in general, are currently scarcely accessible.

After reactivation of the Polish Polar Station at Hornsund in 1978 by the Institute of Geophysics PAS, T. Makarewicz passed on results of standard meteorological observations stored by him to the Laboratory of Deep Sea and Polar Research IMWM where these data were checked for the content and format. From this base the Marine Division of IMWM published "Meteorological Yearbook Hornsund July 1957 – August 1958" in 1982. Table 18.1 displays the basic climatic values from this yearbook.

18. 2. Results of observations of meteorological parameters at Hornsund in 1978–2009

During the consecutive scientific expeditions of the Institute of Geophysics PAS meteorological teams consisted of two observers recruited either from the staff of the Polish weather service (IMWM) or from researchers interested in climatologic problems, working at Polish universities or in research institutes. Table 18.2 presents the list of observers in the consecutive expeditions, together with their affiliations.

Results of observations of the specific meteorological parameters measured at the Polish Polar Station in Hornsund in the period July 1978 – December 2012 are presented in Tables (18.3 – 18.37). These tables present monthly and annual values, as well as mean (Mean), maximum (Max) and minimum (Min) multiannual means. Also presented are standard deviations of the means (σ_n) and year of occurrence of minimum and maximum of a given component. Line ‘-’ marks lack of data.
